

Technology should give our
attention *back.*

A proposal for Aikido

Summer 2026 · backtobeing.tech

Our thesis

Being busy isn't being *present*.

Our generation grew up always on: always behind, never quite here.
The shift worth betting on goes back toward presence. **Technology**
that gives our attention back, instead of taking more of it.

always on

the default today

present

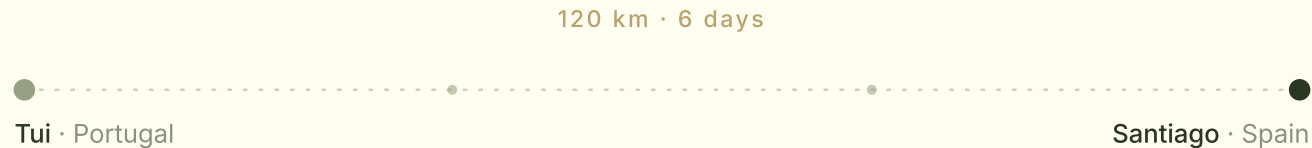

where we're headed

What we do

The world as *our office*.

We're Caesar, Stijn and Max, three founders who build like everyone our age: heads down, screens on. This summer we do it differently.

We walk 120 km of the Camino and build as we go, laptop in the backpack, Starlink overhead, glasses for a screen. The office fits in a bag, and the AI agents that write our code come with us. **Voice in, a joystick to steer, the screen on our face, hands and eyes free for the trail.**

Claude Code in VS Code · voice via Wispr Flow · Switch joystick · Xreal glasses · Starlink · [Aikido on the code](#)

Where Aikido comes in

AI writes the code. It still has to be *safe*.

The code is written handsfree on the trail, by voice and agents. Fast, and fast code ships fast mistakes: a leaked key, a vulnerable dependency, a missing check. We're building a mental-health app that holds the most sensitive data there is. So Aikido scans everything the agents write, before any of it reaches MIND.

What it catches

Every commit the agents write, checked from the backpack: vulnerable dependencies, exposed secrets, insecure code and cloud config, caught before they ship.

Why it fits the walk

We move fast and handsfree, the exact conditions where security quietly slips. Aikido runs in the background, so speed never costs safety.

What MIND keeps

Not just a working app, but one that stays secure: continuous scanning MIND's own team can keep running long after the trail ends.

Why MIND

MIND is the whole *point*.

What we build, we hand over for free to Stichting MIND, one of the largest mental-health organisations in the Netherlands. **The walk ends, the product stays.** That's the proof this isn't a stunt: something real comes out of it, and it has to be trustworthy from day one.

IN YOUR OWN WORDS

If it's worth building, it's worth securing.

The app we build for MIND

A weather report for your *mind*.

MIND holds a huge library of help, but you have to go find it, and the energy to search is exactly what's missing when things are heavy. So we flip it. One question, **how's the weather in your head?**, becomes the way in: you answer in weather, and the app hands you one small step from MIND's content, every day.

Clear

room in your head

Partly cloudy

mixed, but there's light

Cloudy

grey, it's a bit much

Misty

a lot inside, no overview

Stormy

it's heavy today

Where Aikido fits: this app holds how people feel on their hardest days, the most sensitive data there is. Aikido secures every layer, from the code the agents write to the cloud it runs on, so MIND and everyone who opens it can trust what we hand over.

The ask

What we're *asking*.

We're looking for two forms of support, and we'd shape the exact fit on a short call.

Who's already in

We have **Wispr Flow**, **Remote**, **Helloprint**, **Watermelon** and **n8n** on board. We'd love Aikido in the mix as the security layer, the reason AI-built software is safe enough to hand over.

What we're looking for

Two forms of support: **Aikido product access** to secure the build and what MIND keeps running, and a **sponsorship of the journey** toward production, technology and documentation. The next page shows the two levels.

Two ways to come *in*.

A sponsorship of the journey, at two levels. On top of either, Aikido product access for the team through the build and the handover. We'd shape the exact fit together on a call.

The foundation

the core sponsorship

- **Category exclusivity** as the only security tool in the story.
- Genuine **on-screen use of Aikido** securing the code the agents write on the trail.
- A **behind-the-scenes piece** walking through the real Aikido dashboard: what it flagged, what we fixed.
- Your **logo across website, socials** and sponsor touchpoints, and a dedicated announcement post.

These two are the starting point. If Aikido has an idea of its own, a co-published "we secured an app built entirely by AI, on a mountain" story, something only your team would think of, that's what we'd love to shape on the call.

The film

OUR PREFERENCE

everything above, plus the documentary

Everything in The foundation, plus:

- A **branded mini-documentary centered on Aikido**: not security behind a desk, but security keeping up with code built handsfree on the Camino, and the safe handover to MIND.
- The film is **yours to reuse** across your own channels, for as long as it stays online.

The invitation

From first commit to safe handover, *with us.*

We capture all of it in a short documentary, with Aikido on screen where the code gets written and checked. We'd love Aikido in it from the first commit, and to hand MIND something, secured with Aikido, they can trust long after the trail ends.
