Technology should give our
attention *back.*

A proposal for Aikido

Summer 2026 · backtobeing.tech

Our thesis

Being busy isn't being *present*.

Our generation grew up always on: always behind, never quite here.
The shift worth betting on goes back toward presence. **Technology**
that gives our attention back, instead of taking more of it.

always on

the default today

present

where we're headed

What we do

The world as *our office*.

We're Caesar, Stijn and Max, three founders who build like everyone our age: heads down, screens on. This summer we do it differently. We walk 120 km of the Camino and build as we go, laptop in the backpack, Starlink overhead, glasses for a screen. The office fits in a bag, and the AI agents that write our code come with us. **Voice in, a joystick to steer, the screen on our face, hands and eyes free for the trail.**

Claude Code in VS Code · voice via Wispr Flow · Switch joystick · Xreal glasses · Starlink · [Aikido on the code](#)

Where Aikido comes in

AI writes the code. It still has to be *safe*.

The code is written handsfree on the trail, by voice and agents. Fast, and fast code ships fast mistakes: a leaked key, a vulnerable dependency, a missing check. We're building a mental-health app that holds the most sensitive data there is. So Aikido scans everything the agents write, before any of it reaches MIND.

What it catches

Every commit the agents write, checked from the backpack: vulnerable dependencies, exposed secrets, insecure code and cloud config, caught before they ship.

Why it fits the walk

We move fast and handsfree, the exact conditions where security quietly slips. Aikido runs in the background, so speed never costs safety.

What MIND keeps

Not just a working app, but one that stays secure: continuous scanning MIND's own team can keep running long after the trail ends.

Why MIND

MIND is the whole *point*.

What we build, we hand over for free to Stichting MIND, one of the largest mental-health organisations in the Netherlands. **The walk ends, the product stays.** That's the proof this isn't a stunt: something real comes out of it, and it has to be trustworthy from day one.

IN YOUR OWN WORDS

If it's worth building, it's worth securing.

What we're *asking*.

Two forms of support, shaped to fit on a short call: **Aikido product access** for the team through the build and the handover, and a **sponsorship of the journey**. Here is what the sponsorship holds.

The sponsorship **OUR PREFERENCE**

one simple level, kept low-threshold

- **Category exclusivity** as the only security tool in the story.
- Genuine **on-screen use of Aikido** securing the code the agents write on the trail.
- A **behind-the-scenes piece** through the real Aikido dashboard: what it flagged, what we fixed.
- Your **logo on website, socials** and touchpoints, plus an announcement post.

Already on board: Wispr Flow, Remote, Helloprint, Watermelon and n8n. Optional, on request: a branded mini-documentary centered on Aikido, a bigger production at extra scope; the sponsorship above is where we'd start.

The invitation

From first commit to safe handover, *with us.*

We'd love Aikido in from the first commit: securing the code as the agents write it, on screen where it happens, and handing MIND something, secured with Aikido, they can trust long after the trail ends.
